1 Industrial sessions: commercial implementation techniques: Quadtree and R-tree

indexes in oracle spatial: a comparison using GIS data Ravi Kanth V Kothuri, Siva Ravada, Daniel Abugov

window

June 2002 Proceedings of the 2002 ACM SIGMOD international conference on Management of data

Publisher: ACM Press

Full text available: pdf(1.03 MB)

Additional Information: full citation, abstract, references, citings, index terms

Spatial indexing has been one of the active focus areas in recent database research. Several variants of Quadtree and R-tree indexes have been proposed in database literature. In this paper, we first describe briefly our implementation of Quadtree and Rtree index structures and related optimizations in Oracle Spatial. We then examine the relative merits of two structures as implemented in Oracle Spatial and compare their performance for different types of queries and other operations. Finally, ...

2 An efficient method for indexing now-relative bitemporal data

Bela Stantic, Sankalp Khanna, John Thornton

January 2004 Proceedings of the fifteenth conference on Australasian database -Volume 27 CRPIT '04

Publisher: Australian Computer Society, Inc.

Full text available: Dpdf(494.37 KB) Additional Information: full citation, abstract, references

Most modern database applications contain a significant amount of time dependent data and a substantial proportion of this data is now-relative, i.e. current now. While much research has focussed on indexing temporal data in general, little work has addressed the indexing of now-relative data, which is a natural and meaningful part of every temporal database as well as being the focus of most queries. This paper proposes a logical query transformation that relies on the P ...
